This Brutal World

Lonely Planet

Hiroshima is the story
of six people—a clerk, a
widowed seamstress, a
physician, a Methodist
minister, a young
surgeon, and a German
Catholic priest—who

lived through the greatest single manmade disaster in history. In vivid and indelible prose, Pulitzer Prize – winner John Hersey traces the stories of these half-dozen individuals from 8:15 a.m. on August 6, 1945, when Hiroshima was destroyed by the first atomic bomb ever dropped on a city, through the hours and days that followed. Almost four decades after the original publication of this celebrated book, Hersey went back to Hiroshima in search of the people whose stories he had told, and his account of what he discovered is now the eloquent and moving final chapter of

Hiroshima.
Lonely Planet Tokyo Vintage
The Concrete Solutions series of International Conferences on Concrete Repair began in 2003 with a conference held in St. Malo, France in association with INSA Rennes. Subsequent conferences have seen us partnering with the University of Padua in 2009 and with TU Dresden in 2011. This conference is being held for the first time in the UK, in association with Queen ' s University Belfast and brings together delegates from 36 countries to discuss the latest advances and technologies in

concrete repair. Earlier conferences were dominated by electrochemical repair, but there has been an interesting shift to more unusual methods, such as bacterial repair of concrete plus an increased focus on service life design aspects and modelling, with debate and discussion on the best techniques and the validity of existing methods. Repair of heritage structures is also growing in importance and a number of the papers have focused on the importance of getting this right, so that we may preserve our rich cultural heritage of historic structures. This book is an

essential reference work for those working in the concrete repair field, from Engineers to Architects and from Students to Clients. Concrete Solutions 2014 Michelin Travel & Lifestyle Coral and Concrete, Greg Dvorak 's cross-cultural history of Kwajalein Atoll, Marshall Islands, explores intersections of environment, identity, empire, and memory in the largest inhabited coral atoll on earth. Approaching the multiple "atollscapes" of Kwajalein 's past and present as Marshallese ancestral land, Japanese colonial outpost, Pacific War battlefield, American weapons-testing base,

and an enduring home for many, Dvorak delves into personal narratives and collective mythologies from contradictory vantage points. He navigates the tensions between “little stories” of ordinary human actors and “big stories” of global politics—drawing upon the “little” metaphor of the coral organisms that colonize and build atolls, and the “big” metaphor of the all-encompassing concrete that buries and co-opts the past. Building upon the growing body of literature about militarism and decolonization in Oceania, this book advocates a layered, nuanced approach that

emphasizes the multiplicity and contradictions of Pacific Islands histories as an antidote to American hegemony and globalization within and beyond the region. It also brings Japanese, Korean, Okinawan, and American perspectives into conversation with Micronesians’ recollections of colonialism and war. This transnational history—built upon a combination of reflective personal narrative, ethnography, cultural studies, and postcolonial studies—thus resituates Kwajalein Atoll as a pivotal site where Islanders have not only thrived for thousands of years, but also

mediated between East and West, shaping crucial world events. Based on multi-sited ethnographic and archival research, as well as Dvorak 's own experiences growing up between Kwajalein, the United States, and Japan, *Concrete* integrates narrative and imagery with semiotic analysis of photographs, maps, films, and music, traversing colonial tropical fantasies, tales of victory and defeat, missile testing, fisheries, war-bereavement rituals, and landowner resistance movements, from the twentieth century through the present day.

Representing history as

a perennial struggle between coral and concrete, the book offers an Oceanian paradigm for decolonization, resistance, solidarity, and optimism that should appeal to all readers far beyond the Marshall Islands.

Guide: Tokyo truly shows you this city as no one else can.

The Culture Map MIT Press

Often problematically labeled as “ Brutalist ” architecture, the concrete buildings that transformed Boston during 1960s and 1970s were conceived with progressive-minded intentions by some of the world ’ s most influential designers, including Marcel Breuer, Le Corbusier, I. M. Pei, Henry Cobb, Araldo Cossutta, Gerhard Kallmann and Michael McKinnell, Paul Rudolph, Josep Llu í s Sert, and The Architects Collaborative. As a worldwide phenomenon, building with concrete represents one of the major architectural movements of the

postwar years, but in Boston it was deployed in more numerous and diverse civic, cultural, and academic projects than in any other major U.S. city. After decades of stagnation and corrupt leadership, public investment in Boston in the 1960s catalyzed enormous growth, resulting in a generation of bold buildings that shared a vocabulary of concrete modernism. The period from the 1960 arrival of Edward J. Logue as the powerful and often controversial director of the Boston Redevelopment Authority to the reopening of Quincy Market in 1976 saw Boston as an urban laboratory for the exploration of concrete's structural and sculptural qualities. What emerged was a vision for the city's widespread revitalization often referred to as the "New Boston." Today, when concrete buildings across the nation are in danger of insensitive renovation or demolition, Heroic presents the concrete structures that defined Boston during this remarkable period—from the well-known (Boston City Hall, New England Aquarium, and cornerstones of the Massachusetts Institute of Technology and Harvard University) to the already lost (Mary Otis Stevens and Thomas F. McNulty's concrete Lincoln House and Studio; Sert, Jackson & Associates' Martin Luther King Jr. Elementary School)—with hundreds of images; essays by architectural historians Joan Ockman,

Lizabeth Cohen, Keith N. Morgan, and Douglass Shand-Tucci; and interviews with a number of the architects themselves. The product of 8 years of research and advocacy, Heroic surveys the intentions and aspirations of this period and considers anew its legacies—both troubled and inspired.

CONCRETE

ABSTRACTIONS

offers students a hands-on, abstraction-based experience of thinking like a computer scientist. This text covers the basics of programming and data structures, and gives first-time computer science students the opportunity to not only

write programs, but to prove theorems and analyze algorithms as well. Students learn a variety of programming styles, including functional programming, assembly-language programming, and object-oriented programming (OOP).

While most of the book uses the Scheme programming language, Java is introduced at the end as a second example of an OOP system and to demonstrate concepts of concurrent programming.

Proceedings of the International Conference on Microzonation for Safer Construction, Research, and Application Routledge

A photographic exploration of the post-war modernist architecture of London.

This collection of unique and evocative photography of Brutalist architecture by Simon Phipps casts the city in a new light. Arranged by inner London Borough, BRUTAL LONDON takes in famous examples such as the Trellick Tower, the Brunswick Centre and the Alexandra Road Estate, as well as lesser known housing and municipal spaces. It serves as an introduction to buildings the reader may see every day, an invitation to look differently, a challenge to look up afresh, or to seek out celebrated Brutalism across the capital. The book's portable size and maps for each borough make it useful and practical; while the design, by leading agency A Practice for Everyday Life, echoes the aesthetic of Brutalist architecture with rough textured edges and fonts inspired by the site maps of modernist estates. The hardback was finalist

Heroic Penguin

The Japanese urban alleyway, which was once part of people's personal spatial sphere and everyday life has been transformed by diverse and competing interests. Marginalised through the emergence of new forms of housing and public spaces, re-appropriated by different fields, and re-invented by the contemporary urban design discourse, the social meaning

attached to the roji is being re-interpreted by individuals, subcultures and new social movements. The book will introduce and discuss examples of urban practices which take place within the dynamic urban landscape of contemporary Tokyo to portray the life cycle of an urban form being rediscovered, commodified and lost as physical space.
