Education Australia Many companies now recognize that learning through training, development, and knowledge management helps employees strengthen or increase their skills in order to improve or make new products, generate new and innovative ideas, and provide high-quality customer service. Thus, an emphasis on learning through training, development, and knowledge management is no longer in the category of “ nice

to do ” —they are a “ must do ” if companies want to gain a competitive advantage and meet employees ’ expectations. Based on the author ’ s extensive experience in teaching training and development courses to both graduate and undergraduate students, Employee Training and Development, Seventh Edition, retains the lively writing style, inspiring examples, and emphasis on new technology and strategic training from previous editions.

Simulation and skills centres have become established to integrate simulation into mainstream education in all medical, nursing, and

paramedical fields. Borrowing from the experience and methodologies of industries that are using simulation, medical educators are grappling with the problem of rapidly acquiring the skills and techniques required to implement simulation programmes into established curricula. This book assists both novice and

experienced workers in the field to learn from established practitioners in medical simulation. Simulation has been used to enhance the educational experience in a diverse range of fields; therefore a wide variety of disciplines are represented. The book begins with a section on the logistics of establishing a simulation

---

and skills centre and the inherent problems with funding, equipment, staffing and course development, and promotion. Section two deals with simulators and related training devices that are required to equip a stand-alone or institution-based centre. The features, strengths, and weaknesses of training devices are presented to

help the reader find the appropriate simulator to fulfil their training requirements. There is a guide to producing scenarios and medical props that can enhance the training experience. The third section covers adult education and it reviews the steps required to develop courses that comply with 'best practice' in medical

education. Teaching skills, facilitating problem-based learning groups and debriefing techniques are especially important to multidisciplinary skills centres that find themselves becoming a centre for medical education. The manual concludes with guides for the major specialties that use simulation, including military,
