long-term sustained performance can be engineered into the DNA of an enterprise from the verybeginning. But what about the company that is not born with great DNA? How can good companies, mediocre companies, even bad companies achieve enduring greatness? The Study For years, this question preyed on the mind of Jim Collins. Are there companies that defy gravity and convert long-term mediocrity or worse into long-term superiority? And if so, what

---

are the universal distinguishing characteristics that cause a company to go from good to great? The Standards Using tough benchmarks, Collins and his research team identified a set of elite companies that made the leap to great results and sustained those results for at least fifteen years. How great? After the leap, the good-to-great companies generated cumulative stock returns that beat the general stock market by an average of seven times in fifteen years, better than twice the

results delivered by a composite index of the world's greatest companies, including Coca-Cola, Intel, General Electric, and Merck. The Comparisons The research team contrasted the good-to-great companies with a carefully selected set of comparison companies that failed to make the leap from good to great. What was different? Why did one set of companies become truly great performers while the other set remained only good? Over five years, the team analyzed the histories of

all twenty-eight companies in the study. After sifting through mountains of data and thousands of pages of interviews, Collins and his crew discovered the key determinants of greatness -- why some companies make the leap and others don't. The Findings The findings of the Good to Great study will surprise many readers and shed light on virtually every area of management strategy and practice. The findings include: Level 5 Leaders: The research team was shocked to discover the type

---

of leadership required to achieve greatness. The Hedgehog Concept (Simplicity within the Three Circles): To go from good to great requires transcending the curse of competence. A Culture of Discipline: When you combine a culture of discipline with an ethic of entrepreneurship, you get the magical alchemy of great results. Technology Accelerators: Good-to-great companies think differently about the role of technology. The Flywheel and the Doom Loop: Those who launch

radical change programs and wrenching restructurings will almost certainly fail to make the leap. "Some of the key concepts discerned in the study," comments Jim Collins, "fly in the face of our modern business culture and will, quite frankly, upset some people." Perhaps, but who can afford to ignore these findings?

Though recent legislation embedded with the No Child Left Behind Act and the Individuals with Disabilities Improvement Act mandates

the use of evidence in school-based practice to demonstrate positive outcomes for all students, school social workers - especially those long out of school - often lack the conceptual tools to locate, evaluate, and apply evidence in order to demonstrate the effectiveness of their work. The first of its kind tailored specifically to this audience, this SSAAA Workshop title guides school professionals in infusing research throughout their daily practice. It shows school service providers a pragmatic approach to informing every major practice decision with the appropriate research so that students

---

receive the best possible services. This includes how to use research to make reliable and valid assessments, how to use research to choose the best intervention, and how to do research to evaluate progress. Raines goes beyond creating a catalog of interventions that will soon be outdated and provides school social workers with a detailed road map of the EBP process. Chapters detail the nuts and bolts of EBP, explaining how to ask a relevant, answerable question; where to search for evidence; how to appraise the literature and avoid the pitfalls of web based information; how to adapt and apply the

evidence in a developmentally and culturally sensitive way; and how to evaluate the results. Detailed examples along the way, including sample spreadsheets practitioners can easily adapt to evaluate their students' progress, bring accountability within reach for school professionals who struggle to find the time, resources, and support sufficient to apply the best evidence to their schools. *Strategic Management* Prentice Hall Research conducted over the past two decades has shown that poor patient understanding of

medication instructions is an important contributor to the more than 1 million medication errors and adverse drug events that lead to office and emergency room visits, hospitalizations, and even death. Patients who have limited literacy skills, who have multiple comorbidities, and who are elderly face the greatest risk, and limited literacy skills are significantly associated with inadequate understanding and use of

---

prescription instructions and precautions. The Agency for Healthcare Research and Quality notes that only 12 percent of U.S. adults have proficient health literacy that allows them to interpret a prescription label correctly. Given the importance of health literacy to the proper use of medications, and the apparent lack of progress in improving medication adherence, the Roundtable on Health Literacy formed an ad hoc

committee to plan and conduct a 1-day public workshop that featured invited presentations and discussion of the role and challenges regarding clarity of communication on medication. Participants focused on using health literacy principles to address clarity of materials, decision aids, and other supportive tools and technologies regarding risks, benefits, alternatives, and health plan coverage. This

publication summarizes the presentations and discussions from the workshop.

Drug overdose, driven

the leading cause of

the intersection of two public  
health challenges: reducing  
the burden of suffering from
