This revised and updated Second Edition presents a practical introduction to operating systems and illustrates these principles through a hands-on approach using accompanying simulation models developed in Java and C++. This text is appropriate for upper-level undergraduate courses in computer science. Case studies throughout the text feature the implementation of Java and C++ simulation models, giving students a thorough look at both the theoretical and the practical concepts discussed in modern OS courses. This pedagogical approach is designed to present a clearer, more practical look at OS concepts, techniques, and methods without sacrificing the theoretical rigor that is necessary at this level. It is an ideal choice for those interested in gaining comprehensive, hands-on experience using the modern techniques and methods necessary for working with these complex systems. Every new printed copy is accompanied with a CD-ROM containing simulations (eBook version does not include CD-ROM). New material added to the Second Edition: - Chapter 11 (Security) has been revised to include the most up-to-date information -

Chapter 12 (Firewalls and Network Security) has been updated to include material on middleware that allows applications on separate machines to communicate (e.g. RMI, COM+, and Object Broker) - Includes a new chapter dedicated to Virtual Machines - Provides introductions to various types of scams - Updated to include information on Windows 7 and Mac OS X throughout the text - Contains new material on basic hardware architecture that operating systems depend on - Includes new material on handling multi-core CPUs

A gifted education Legacy Award winner, Social-Emotional Curriculum With Gifted and Talented Students provides a thorough introduction to methods for developing social-emotional curricula for use with gifted and talented learners in the school setting. Including overviews of strategies that work for implementing social-emotional strategies in the everyday curricula, this book, part of the Critical Issues in Equity and Excellence series, a joint publication project of the National Association for Gifted Children and Prufrock Press, combines research and experience from leading scholars in the field of the affective needs of gifted students in a convenient guide for teachers, administrators, and gifted education program directors. The book covers theories to guide affective curricula, the needs of minority students, models to develop social-emotional curricula, tips for counseling gifted students, and strategies to promote the social-emotional needs of gifted students, along with discussions of suicide prevention among this population, the use of bibliotherapy and discussion groups, and the teacher-counselor connection in affective curricula. This handy guide to developing social-emotional curricula for gifted students is a necessity for anyone

serving and working with this population.

Real-World Writers shows teachers how they can teach their pupils to write well and with pleasure, purpose and power. It demonstrates how classrooms can be transformed into genuine communities of writers where talking, reading, writing and sharing give children confidence, motivation and a sense of the relevance writing has to their own lives and learning. Based on their practical experience and what research says is the most effective practice, the authors share detailed guidance on how teachers can provide writing study lessons drawing on what real writers do and how to teach grammar effectively. They also share a variety of authentic class writing projects with accompanying teacher notes that will encourage children to use genres appropriately, creatively and flexibly. The authors' simple yet comprehensive approach includes how to teach the processes and craft knowledge involved in creating successful and meaningful texts. This book is invaluable for all primary practitioners who wish to teach writing for real.

This book provides an in-depth understanding of big data challenges to digital forensic investigations, also known as big digital forensic data. It also develops the basis of using data mining in big forensic data analysis, including data reduction, knowledge management, intelligence, and data mining principles to achieve faster analysis in digital forensic investigations. By collecting and assembling a corpus of test data from a range of devices in the real world, it outlines a process of big digital forensic data analysis for evidence and intelligence. It includes the results of experiments on vast volumes of real digital forensic data. The book is a valuable resource for digital forensic practitioners, researchers in big data, cyber threat hunting and intelligence, data mining and other related areas.

Real World Psychology balances comprehensive

coverage of the key concepts in introductory psychology with a concise presentation style and engages students with current and interesting research that explores these concepts in real-life contexts. Real World Psychology features the incomparable author team of Karen Huffman (Palomar College) and Catherine Sanderson (Amherst College) who create an outstanding text that is appealing to students and instructors at a wide range of academic institutions. The new edition has been thoroughly updated and features a new focus on Scientific Thinking and Practical Applications underscoring the fact that connecting the principles of psychological science to everyday life is critical to student engagement, and ultimately key to their success – not only in the introductory psychology course, but in whatever their chosen field of study and in everyday life. Students will leave the course with an appreciation of how a basic, yet scientific understanding of human behavior can benefit them in their studies, in their personal lives, and in their professional endeavors.

Instructional Design in the Real World: A View from the Trenches offers guidance on how the traditional instructional design system has been used and how it must be changed to work within other systems. The environments and systems that affect the ADDIE (Analysis, Design, Development, Implementation, Evaluation) process and to which it must be adapted include corporations, industry, consulting organizations, health care facilities, church and charitable groups, the military, the government, educational institutions, and others. Its application must be filtered and altered by the environments and the systems where the learning or training takes place. Every chapter includes a case study showing how the application of ID strategies, learning theories, systems theory, management theories and practices and communication tools and practices are adapted and applied in various environments. The chapters also contain lessons learned, tool tips, and suggestions for the future.

This book discusses the effective use of modern ICT solutions for business needs, including the efficient use of IT resources, decision support systems, business intelligence, data mining and advanced data processing algorithms, as well as the processing of large datasets (inter alia social networking such as Twitter and Facebook, etc.). The ability to generate, record and process qualitative and quantitative data, including in the area of big data, the Internet of Things (IoT) and cloud computing offers a real prospect of significant improvements for business, as well as the operation of a company within Industry 4.0. The book presents new ideas, approaches, solutions and algorithms in the area of knowledge representation, management and processing, quantitative and qualitative data processing (including sentiment analysis), problems of simulation performance, and the use of advanced signal processing to increase the speed of computation. The solutions presented are also aimed at the effective use of business process modeling and notation (BPMN), business process semantization and investment project portfolio selection. It is a valuable resource for researchers, data analysts, entrepreneurs and IT professionals alike, and the research findings presented make it possible to reduce costs, increase the accuracy of investment, optimize resources and streamline operations and marketing.

Doctoral Thesis / Dissertation from the year 2022 in the subject Engineering - Automotive Engineering, grade: 8.0, Anglia Ruskin University (FACULTY OF SCIENCE & ENGINEERING), course: Mechanical Engineering, language: English, abstract: The aim of the dissertation is to develop a new numerical optimisation technique for the

diffuser geometry of a typical turbocharger compressor, using a non-parametric optimisation method (adjoint). This leads to an increase in power and thermal efficiency in real-world drive cycles for passenger car engines. The geometry and experimental data correspond to the TD025-05T4 compressor from the 1.2-liter Renault Megane passenger car supplied by MTEE. In this study, a set of numerical simulations were conducted along two turbocharger compressor speed lines at 150,000 rpm and 80,000 rpm to analyse and validate the results against experimental data. Three points on each speed line are selected: one point each in regions close to surge and choke and a point in the stable zone of the compressor map. In addition, this study optimises the diffuser geometry in a passenger vehicle turbocharger compressor using a gradient-based solution approach employing a non-parametrical adjoint shaping optimisation for ideal gas turbulent compressible flow applications. The adjoint solver is a gradient-based optimisation that can automatically generate a series of iterations of a design so that the mesh gradually changes shape to meet a single goal, like the efficiency of the compressor in this case. The study considers a total of six operating cases on the compressor map to optimise the full and partial load compressor operations, leading to a real-world drive cycle. These cases are the three cases (closer to surge, stable midpoint, and closer to the choke point) on each of the speed lines. A typical result for mid-stable operation on a 150,000 (rpm) speed line shows a gradual increase in efficiency up to a maximum of 2.6% improvement. While, for choke and surge optimisation, the geometry variation of the optimised diffuser is different, in the stable central area for both speed lines, the geometry change is consistent. Therefore, the diffuser can be made to work best for both half and full load engine operation. As a result, the optimum diffuser geometry impacts engine efficiency and the overall performance of a typical passenger car for real drive cycles, increasing power and slightly improving thermal efficiency. When a typical car engine is running at full and half-load in real-world operation, the improved compressor efficiency is expected to make a small difference. This will make the engine more powerful and more efficient by about 0.1%.

"John Rhodes' Videoconferencing for the Real World, is a one of the world's most comprehensive blueprints on the awesome power of videoconferencing." From the Foreword by Brad Caldwell Chairman ICIA and

President of Integrated Media Services, Anaheim, CA Designed to be useful to both technical and non-technical managers, Video-Conferencing for the Real World demystifies the subject of video communications. It provides easy-to-follow guidelines for deploying a cost-effective video-conferencing solution tailored to an organization's specific needs. Developed to flexible to the readers need, Video Conferencing for the Real World offers dynamic problem-solving techniques for the communication challenges facing managers today. Examining the technical, economic, and organizational aspects of each requirement and solution, this book offers a sound base of technical information and provides practical solutions based on a wealth of professional experience. Combining his own ideas with the input of system managers and users, service providers, consultants, and manufacturers, the author has developed a guide that will help readers make more informed investments of their time and money. Special attention is paid to conducting an effective needs analysis, and the development of solutions that will adapt easily to future changes in organizational requirements. Covering a variety of solutions, this book explores the advantages and disadvantages of desktop systems, set-top systems, rollabout systems, and room systems. In addition to compression, multipoint conferencing and data conferencing, this book also addresses topics such as, pilot projects, the preparation of RFPs, service contracts, training, content creation, and convergence.

Numerous self-driving cars algorithms rely on grid maps for motion planning, obstacles avoidance or environment perception. Obtained from fused sensory information, the occupancy grids (OGs) are nowadays among the most popular solutions used in series production in automotive industry. In this paper, we extend Deep Grid Net (DGN), a deep learning(DL) system designed for understanding the context in which an autonomous car is driving. We consider this paper a granular approach to DGN method due to the improvements added to the original research.

In the world of dogs, there is now more awareness than ever of the need to provide enrichment, especially in shelters. But what exactly is enrichment? The concept is pretty straightforward: learn what your dog 's needs are, and then structure an environment and routine that allows them to engage in behaviors they find enriching. To truly enrich your dog 's life, you should offer them opportunities to engage in natural or instinctual behaviors. Aside from the limitations we have to place on a dog in today 's modern, busy world, the biggest constraint to enriching your dog 's life is your imagination! What the experts say about Canine Enrichment: Don 't let the word "enrichment" in the title fool you into thinking that the scope of this book is too narrow or not something you will find valuable. It focuses comprehensively on meeting your dog 's needs and is written in a holistic, science-based, practical, straightforward, and easy-to-understand way. I love this book! Ken Ramirez, author of Animal Training: Successful Animal Management Through Positive Reinforcement Canine

Enrichment is a deep dive into what dogs really need and how we can provide it. It 's a great book for dog lovers who want to go beyond the standard superficialities of "dogs need exercise." Just the chapter on agency is worth the price of the book! Patricia McConnell, Ph.D., CAAB Emeritus, author of The Other End of the Leash and The Education of Will The scope of this book is ambitious and the authors deliver, navigating the subject of enrichment with depth and relevance. Caregivers will gain critically important perspectives and practical information to improve the lives of their animals. Susan G. If you want to learn how to shoot a basketball, you begin by carefully observing someone who knows how to shoot a basketball. If you want to be a writer, you begin by carefully observing the work of

accomplished writers. Recognizing the importance that modeling plays in the learning process, high school English teacher Kelly Gallagher shares how he gets his students to stand next to and pay close attention to model writers, and how doing so elevates his students' writing abilities. Write Like This is built around a central premise: if students are to grow as writers, they need to read good writing, they need to study good writing, and, most important, they need to emulate good writers. In Write Like This, Kelly emphasizes real-world writing purposes, the kind of writing he wants his students to be doing twenty years from now. Each chapter focuses on a specific discourse: express and reflect, inform and explain, evaluate and judge, inquire and explore, analyze and interpret, and take a stand/propose a solution. In teaching these lessons, Kelly provides mentor texts (professional samples as well as models he has written in front of his students), student writing samples, and numerous assignments and strategies proven to elevate student writing. By helping teachers bring effective modeling practices into their classrooms, Write Like This enables students to become better adolescent writers. More important, the practices found in this book will help our students develop the writing skills they will need to become adult writers in the real world.

In Racing Toward Zero, the authors explore the issues inherent in developing sustainable transportation. They review the types of propulsion systems and vehicle options, discuss low-carbon fuels and alternative energy sources, and examine the role of regulation in curbing emissions. All technologies have an impact on the environment, from internal combustion engine vehicles to battery electric vehicles, fuel cell electric vehicles, and hybrids-there is no silver bullet. The battery electric vehicle may seem the obvious path to a sustainable, carbon-free transportation future, but it's not the only, nor necessarily the best, path forward. The vast majority of vehicles today use the internal combustion engine (ICE), and this is unlikely to change anytime soon. Improving the ICE and its fuels-entering a new ICE age-must be a main route on the road to zero emissions. How do we go green? The future requires a balanced approach to transportation. It's not a matter of choosing between combustion or electrification; it's combustion and electrification. As the authors say, "The future is eclectic." By harnessing the best qualities of both technologies, we will be in the best position to address our transportation future as quickly as possible.
